Amendments to the Specification:

Please replace the paragraph beginning at page 1, line 22 with the following amended paragraph:

As shown in FIG. 1, an exemplary system 10 includes a processor 12 and a memory 14. Memory 14 includes an operating system 16, a compiler 18, source code 20 and object code 22. In some embodiments, compilation and execution are not combined in a single system. In such embodiments, source code is compiled into an object file(s) in a first system, while the execution of the linked object file(s) occurs in a second system. In one example, the compiler 18 reads source code in a source code file on a storage device, such as a hard disk. The system 10 can include an input/output device 24 and a storage device 26. Examples of a computer-readable medium include memory and storage as discussed above.
